

R125DI. R200DI. R270DI. Daylight luminaires...
... have already brought so many news to light.

Sachtler's compact HMI lights offer a completely new quality of light. They offer flicker-free daylight illumination with an extremely high degree of light efficiency. With our patented no-noise ignition system, you can operate our lights silently. Oversized ignition coils prevent electrical losses and are completely noise-free even during flicker-free operation.

Batronic and Netronic. Flickerfree electronic ballasts.

All the ballast units we use operate fixtures completely flicker free. Batronic the battery operated ballast used in the system, is compact and can be used universally. Thanks to its lamp head detection system, it can operate lights from the daylight Reporter group completely flicker-free. Together with the 30V Sachtler Belt Pack® batteries, the Batronic 1 and 2 form a light weight and compact unit;

Reporter 200DI. As quiet as they are bright.

The Reporter 200DI supplies more light from a 200W bulb than any other light, yet is only slightly larger than the smallest fixture in its family. Even with a tungsten filter, the Reporter 200DI delivers more light than a 300W halogen bulb. With its optical system and special electronic modules, it uses all the outstanding features we have derived from state of the art lighting developments. Hot restarts? Not a problem, even several times in a row.

the Batronic simply snaps onto the battery. Shoulder and waist belts allow you to comfortably carry this combination even during rapid movements. Carrying the battery won't pose a problem. The ergonomics of this combination extend far beyond that of a battery belt. With a separate ballast to charge the battery, simply snap the fully automatic Speedcharger onto the battery. If the Batronic is connected to the Power Pack 300 power supply instead of the battery, it can power the daylight Reporter from the mains voltage as well. The Netronic and Power Pack 300 automatically adjust to suit any mains voltage and are extremely lightweight thanks to their compact design.

Reporter 270DI. For portable applications and beyond.

The Reporter 270DI is the most powerful battery operated light on the market. With its single ended 270W HMI bulb, the Reporter 270DI offers an outstanding light performance of 6000 Lux in the spot setting. With its even light distribution at all focal settings and a wide setting range, the R270DI can be used for much more than just portable applications. For instance, it can step in as an "open face" fixture for creative lighting. As a hand held or stand mounted light, the Reporter 270DI with its fully insulated plastic casing is highly versatile.

Reporter 125DI

Code No.	R125DI					
Weight fixture	700g					
Weight barndoor:	150g					
Cable length	3.5m					
Stand mount:	In camera accessory shoe, 1/4" threaded hole or with accessories special					
Socket	Osram HMI 123 W/SE					
Bulb:	Osram HMI 123 W/SE					
Light output in Lux						
With distance in m	2.00	3.00	4.00	5.00	6.00	7.00
Spot 16°:	11250	5000	2810	1800	1250	920
Flood 46°:	2190	970	550	350	240	180

Reporter 200DI

Code No.	R200DSM					
Weight fixture	975g					
Weight barndoor:	295g					
Cable length	3.8m					
Stand mount:	In camera accessory shoe, 1/4" threaded hole or with accessories					
Socket	GZY9.5					
Bulb:	Recommended: Philips MSR200HR Replacement: Osram HMI 200SE					
Light output in Lux						
With distance in m	2.00	3.00	4.00	5.00	7.00	10.00
Spot 16°:	15630	6940	3910	2500	1280	630
Flood 46°:	3130	1390	780	500	260	130

Reporter 200DI

Reporter 270DI

Code No.	R270DI					
Weight fixture	1500g					
Weight barndoor:	260g					
Cable length	3.8m					
Stand mount:	Socket 16/2, 16mm					
Socket	FaX 1.5-3x1					
Bulb:	Osram HMI 250 W/SE					
Light output in Lux						
With distance in m	3.00	5.00	7.00	10.00	12.00	15.00
